Additional description

The metal wall rack Teun (hwxwd): 188x120x35 cm is from the Dutch brand WOOD. The Teun wall rack is made of a tubular iron frame, 20x20 mm, combined with seven iron shelves. The entire rack is finished with a black powder coating. You can attach the rack Teun to the wall or place it as a room divider.

The thickness of each board is 2 cm and the maximum weight per board is 30 kg. Each 'intermediate compartment' has a height of 28 cm. The total height of the 'compartment', based on three compartments, is 30 cm up to and including the 'intermediate compartment'. The total height of the compartment is 60 cm. The rack has a total weight of 29 kg.

Please note: as a room divider, one narrow side must always be placed against a wall in order to be able to securely attach this rack. It is not recommended to place the rack in a free-standing position, as this may cause the rack to topple over. In this series Teun, of the brand WOOD, a wall rack width 85 cm, a standing coat rack and a sidetable are available.
