**Chair Peggy fabric rough**

FSC 100% certified

550-020-065/066

“ Thank you for choosing a pols potten product.  
To ensure safe and satisfactory use of this product,  
please carefully read the below instructions beforehand.”

## **general information**

The frame of the chair is made of painted ashwood (FSC 100% certified) .  
The padding used inside is of polyether and high grade density foams each carefully chosen for optimal seating comfort. The chair is upholstered with a 75% polyester and 25% cotton fabric. This chair is for indoor use only.

## **care instructions**

**Daily use of fabric.** Proper care extends the life of your furniture. Here are a few tips:

- Avoid direct sunlight as the colour of the fabric may be adversely affected.
- Furniture fabrics are easily damaged by sharp pant buckles and buttons, pet's claws, toys and rings etc. which can permanently damage the weave. Beware that dark painted jeans may also stain your furniture!

**Liquid stains:** most important tips for the treatment of liquid stains.

- Liquid spills must be treated immediately. Gently rub with wide, gentle strokes with a light colored cotton cloth. Do not scrub or dab stains. This causes irreparable damage to the weave.
- Do not use just any household solution of gall soap, detergent or green soap. These substances are strongly alkaline and sticky, which means that the fabric will quickly become dirty again. It is also difficult to completely rinse all traces of soap from the furniture fabric.
- Test any cleaning agent on a hidden piece of fabric before applying it to a stain.
- Seek professional advice if you don't know how to treat a dried stain. Cleaning treatments may worsen the original stain.

**Moist food spills:** most important tips for the treatment of stains due to food spills.

- Moist food spills must be treated immediately. Remove as much of the spilled food with a spoon, working from the outside inwards.

- Moisten a preferably light colored cotton cloth or hand towel with cold water, wring out any excess water and place it on the stain. Repeat after 6 hours until the stain is completely absorbed. Do not repeatedly lift the cloth during this process, this interrupts the absorption process. Do not use kitchen paper towel for the above treatment; its absorbency is weaker and the paper may contain ink that will cause another type of stain.
- After cleaning the fabric allow the treated area to dry out completely before using the furniture again.
- Consult [www.james.eu](http://www.james.eu) for additional stain treatments or seek professional advice

**Taking care of the wooden parts:**

- Clean by wiping with a damp cloth and immediately wipe dry with a soft dry cloth. Avoid contact with abrasive cleaning agents, alcohol and solvent based substances as they can damage the surface.
- The use of furniture polish or sprays is not necessary or recommended.
- Remove liquid spills immediately with an absorbent cloth to prevent staining.
- Do not strike with hard or sharp items.

## **safety note**

- Always completely lift the furniture when moving it. Handle and move it with care as improper handling may cause damage or injury.
- Heavy/larger furniture pieces should be moved by two persons.
- Ensure the furniture is always placed level on its four legs.
- Do not stand, climb or jump on the furniture.
- Do not sit on the armrest of the furniture.
- Please keep these instructions for future reference.
